INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/EP2004/008891

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

- D1: WO 02/05380 A (ALLGON AB ; DONGHUI LIU (SE); FALKEN HENRIK (SE); RUTFORS TOMAS (SE) 17 January 2002 (2002-01-17)
- D2: EP-A-1 317 116 (SAGEM) 4 June 2003 (2003-06-04)
- D3: US-B1-6 326 927 (HILL ROBERT ET AL) 4 December 2001 (2001-12-04)
- D4: US 2002/158803 A1 (COMMENS MATTHEW H ET AL) 31 October 2002 (2002-10-31)
- D5: US-B1-6 201 501 (ARKKO AIMO ET AL) 13 March 2001 (2001-03-13)
- 1. Documents D2-D4 are the closest prior art to the subject-matter of claim 1, and show antennas with two flat elements and a component disposed between the two elements. For obvious reasons, the component will be provided on a section making small contributions to the main antenna currents (to avoid disturbing it). For example in D2, the "one component (24, 26, 28, 30)" is placed between the plates of an inverted-F antenna. As to the claimed "small contribution to the antenna current", the applicant may refer to e.g. § [0021] of D2.

However, in D2-D4 the "one component" is a speaker or a camera (D2), electronic components (D3) or a low noise amplifier (D4), thus novelty must be acknowledged for claims 1-12 of the application over D2-D4, because they specify that the "one component" is an antenna. As to inventive step, the examiner must also recognise that an antenna could not be used as an "extra component" in either of D2, D3 or D4, because the "extra component" is placed in a part screened from the outside by the main antenna.

2. Document D1 fails to disclose an antenna with a "second antenna element stretching essentially along a side of the first antenna element".
